Bulk data

The Bulk data set is primarily used for vehicle buyers to check if a vehicle is genuine. The data consists of vehicle identifying information which gives the Vehicle Registration Number (VRN), Vehicle Identification Number (VIN), make, model etc. It does not include names or addresses. There are 47 fields in each vehicle record and these fields cannot be broken down to suit individual requirements. The data is encrypted and supplied via CD-ROM and then despatched using a secure delivery service.

Customers receive:

- weekly Cherished Transfer and Keeper Change data
- monthly First Registration data, and
- data Refresh every six months. (A scan of the whole vehicle database which gives a snapshot of each record excluding details of vehicles that have been unlicensed or not declared off road (SORN) for over a year).

If you become a customer you will first receive a Data Refresh. These scans are only run in January and July of every year.

The data is released under the provision of Regulation 27 of the Road Vehicle (Registration and Licensing) Regulations 2002. In this context the Agency is prepared to release data in bulk, to underpin vehicle check databases which the public and others may refer to, to improve road safety, to aid consumer protection and to deter vehicle theft. Companies who wish to apply for the data must be able to demonstrate reasonable cause.
