Transport Security Measures - attitudes and acceptability

In 2006 the Department for Transport (DfT) tested potential options for new transport security equipment for the rail and London Underground networks. In depth, qualitative research was conducted at each of the four trails to understand what the public's attitude to security screening was, and what factors influence their acceptability of it. In addition, a survey was conducted with residents in the area surrounding Greenford station.

Research findings: Attitudes to transport security after July 2005 London bombings

A report on Londoners and London Underground users' attitudes to transport security after the July 2005 bombings. Produced by Social Research and Evaluation Division.
