

Public Transport Statistics Bulletin GB: 2006 edition

This bulletin continues the annual series of Transport Statistics Bulletins with tables of data for land-based public transport in GB. Targets that apply to a particular mode of public transport are highlighted in the tables in this section.

The bulletin includes data from the 2005/06 survey of Public Service Vehicle operators, bus and rail data from Transport for London, vehicle data from DVLA and information from other rail and tram operators. It also summarises data on characteristics of public transport users through the National Travel Survey, and of their opinions from the DfT quarterly Bus Passenger Satisfaction Survey.

Data are also incorporated from the Department's annual survey of Blue Badge parking schemes, and data from modules sponsored in the ONS Omnibus survey regarding awareness of concessionary fare schemes for the elderly.

Summary tables have been grouped in the introduction to illustrate the main trends. Longer time series data appear in annexes. Summary data also appear there from the *National Rail Trends Yearbook 2005-06*.
