

Cars: make and model: the risk of driver injury in GB: 2000-2004

Introduction

This publication presents estimates of the risk of driver injury in popular models of car, if they are involved in a two car injury accident. **It does not address issues of primary safety and gives no information on whether or not specific makes of car have different risks of being involved in an accident.** The statistics are based on personal injury road accident data reported to the Department for Transport by police forces within Great Britain.
