

MSVA Testing Standards Explanation	IM 10
	REF No. 001
<p>Details Of Enquiry: Some custom machines have rear number plate mountings on the side rather than on the rear of the bike. Is this acceptable?</p>	
<p>Answer: If a vehicle is presented with a side mount it will need to have a matching mount on the opposite side of the machine. This is to comply with visibility requirements for rear registration plates. Any lamps (rear position, stop, registration plate) would also need to be duplicated.</p> <p>Answer Given By: MSVA Technical Date: December 2003</p>
