Check list for operators who wish to obtain a Low Emissions Certificate (LEC) or Reduced Pollution Certificate (RPC) to drive within the London Low Emission Zone.

This checklist has been developed to assist operators to prepare their vehicle prior to a LEC/RPC test being carried out by VOSA. The vehicle presenter needs to complete the checklist and bring it with them at the time of the LEC/RPC test.

Question 1. Do you have a vehicle with an Eligible engine? If so, fill in the following particulars:

Vehicle Registration Number _____ Vehicle Make_____
Engine Model _____which is found on page _____ of the TfL Eligible engines list.

Question 2. Do you have a vehicle fitted with a certified abatement device/particulate trap? If so, fill in the following particulars:

Vehicle Registration Number _____ Vehicle Make_____
Engine type _____Trap ID number _____, which is found on page ____ of the TfL Approved Devices lists.

Important preparation points:

- The vehicle presenter must be able to tilt the cab/remove or reinstate access panels by the manufacturer. Bring the bar to tilt the cab.
- Once the cab is tilted, the presenter must be able to show the above particulars to the VOSA inspector.
- If you cannot access the engine type information because the cab cannot be tilted or if the engine plate is missing or can't be viewed, then you must present at the start of the test the original letter from the vehicle manufacturer (not local dealer), showing the original engine type and serial number to the VOSA inspection staff.

If VOSA cannot find that the engine model is on the TfL Eligible engines list or the Approved device fitted onto the vehicle is on the TfL Approved Devices lists, VOSA will issue a Notification of refusal to issue a LEC/RPC.

VOSA Staff to fill in only

Circle one: Pass/Fail Circle one: LEC/RPC Date of registration_____

Test K (m^{-1}) _____PM emissions standard _____

Engine Make/Model_____ Circle one: P/M/G
